

Easter holiday challenge!

This term we have enjoyed science week. It is a celebration of science, technology, engineering and maths. We have carried out a variety of Science activities throughout school to celebrate. Science is such a fun and hands-on subject that we thought we would ask the children to continue the fun and learning at home. Over the holidays we would like to set the children a challenge. Our theme is Building in Stories.

You and your child might like to try to:

Build a bridge that is strong enough for the 3 Billy Goats to cross - what shapes will you use in your structure to make it strong?

Build a raft or boat for the Gingerbread Man to cross the river - what materials will you use to keep his feet dry?

Build the sweet house from Hansel and Gretel - What will you use to stick the sweets together?

Build a carriage for Cinderella to travel to the Ball, it doesn't need to be a pumpkin! - how will you make the wheels turn?

These are just some ideas. If you want to choose another story that would be great too.

Share with us your creations on 2Build A Profile!
